

Resume

Daniel Diaz

Software Engineer

Objective:
In search of an
software development
position with a forward
thinking organization.

Experience

- 2015- **Engineer - FTC Software, Launch Engineering**
Western Digital
As part of the FTC Software team I work on tools that automate firmware testing across thousands of systems. Most recently I helped develop a client side python application that interacts with our microsoft stack to double the firmware architectures our tools can test.
- 2014-15 **Engineering Intern**
Western Digital
On the Tools and Efficiency Team I improved the resource tracking tool GUI to reduce the time required for user input.
- 2013-14 **Programming Intern**
iLeads.com
Updated the Lead Marketplace Algorithm to incorporate 5 new lead sources and reduce the number of leads purchased over market value.
- 2012-13 **IT Intern**
UCI Transportation and Distribution Services
Using the Google Maps API I created an interactive parking map that displayed the total parking spaces available in each lot to assist in student permit purchases.

Projects

- 2014 **Research**
Prof. Beckman
Created a stand-alone python app to do text and pattern analysis on congressional records.
- 2010- **Personal Website**
<https://dddiaz.com>
Python and Docker application with continous deployment using AWS Code Pipeline.
